

Experience Clean, Pure Water with AquaTru

AquaTru Freestanding Reverse Osmosis Water Purifiers

AquaTru filters are independently tested and certified to reduce 84 contaminants, offering clean, healthy water right at your fingertips. Designed for health-conscious individuals and sustainability advocates, AquaTru stands out as the scientifically validated water choice in an uncertain market, ensuring safe drinking water for all.

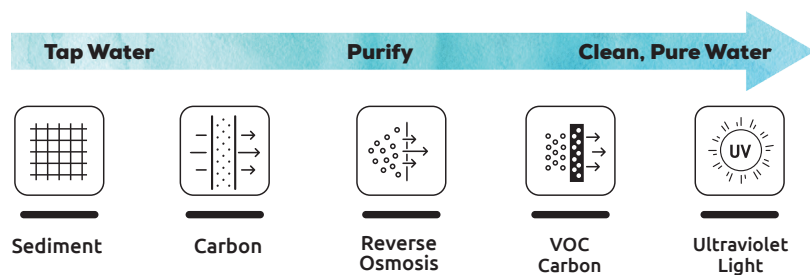

Together, AquaTru customers have filtered enough water to prevent the use of 2 billion single-use plastic bottles—which could end up in landfills and waterways.

AquaTru Key Features

Our Freestanding Model 1 Reverse Osmosis Purifier is suitable for larger areas and efficiently serves up to 25 people.

Advanced Multi-Stage Reverse Osmosis Purification Technology:

- 5 Stage Filtration

- Reduces harmful contaminants like “Forever Chemicals,”* Lead, Chlorine, Chloramine, Fluoride and more.

- Digital display with filter change alerts

- Temperature control with hot and cold dispensing options

- Bottle saving counter to track usage

- Easy-to-change DIY filters for simple maintenance

Model 1

*The filters have been tested and certified for the reduction of PFOS and PFOA.

How Does it Work?

5 Stage Reverse Osmosis Purification Process

STAGE

1

Pre/Carbon Filter

In Stage 1, the water passes through a mechanical Pre-Filter that removes larger particles like sediment and rust. In Stage 2, the Carbon Filter removes Chlorine and Chloramine.

STAGE

2

STAGE

3

R.O. Filter

Ultra-fine Reverse Osmosis Filter filters out dangerous inorganic chemicals, including Lead, Chromium 6, Arsenic, Uranium, Nitrate, and other heavy metals.

STAGE

4

VOC Filter

Activated coconut block VOC Carbon Filter removes organic compounds like rocket fuel, prescription drug residue and PFAS, leaving you with pure, great-tasting water.

STAGE

5

UV Light

This process helps to reduce bacteria and algae growth in the holding tank.

Digital Display
Tells you when to change the filter
